Fractal Functions, Fractal Surfaces, and Wavelets - 2nd ... Fractal Functions, Fractal Surfaces, and Wavelets, Second Edition, is the first systematic exposition of the theory of local iterated function systems, local fractal functions and fractal surfaces, and their connections to wavelets and wavelet sets. The book is based on Massopust's work on and contributions to the theory of fractal. Fractal - Wikipedia The fractal curve divided into parts  $1/3$  the length of the original line becomes 4 pieces rearranged to repeat the original detail, and this unusual relationship is the basis of its fractal dimension. This also leads to understanding a third feature, that fractals as mathematical equations are "nowhere differentiable". In a concrete sense, this means fractals cannot be measured in traditional ways. Fractal Functions, Fractal Surfaces, and Wavelets ... Iterated function system - Wikipedia The fractal is made up of the union of several copies of itself, each copy being transformed by a function (hence "function system"). The canonical example is the Sierpiński triangle . The functions are normally contractive , which means they bring points closer together and make shapes smaller. An Introduction to Fractals - Paul Bourke The Mandelbrot set is created by a general technique where a function of the form  $z_{n+1} = f(z_n)$  is used to create a series of a complex variable. In the case of the Mandelbrot the function is  $f(z_n) = z_n^2 + c$ . Fractal Programming - Fractal Equations Fractal Equations Overview Fractal Equations are the programs used to define Mandelbrot Fractals in the Fractal Science Kit fractal generator. Before you begin, please read the Mandelbrot Fractal Overview. Fractal Science Kit - Mandelbrot Fractal Overview Mandelbrot Fractals. Mandelbrot fractals are the result of iterating a fractal formula. A fractal formula is a statement like:  $z = z^2 + c$ . This statement takes 2 complex values found in the variables  $z$  and  $c$ , and combines them based on the expression to the right of the equal sign; in this case, by squaring  $z$  and adding  $c$  to the result. The resulting complex value is assigned to the variable.
